354.5	570.5	History of the Alaska Highway	<p>The Alaska Highway's route through northwestern Canada and Alaska is located in the discontinuous permafrost zone, where the soil is frozen solid in some places and boggy in others. In the middle of March 1942, approximately one month after President Franklin Roosevelt authorized the highway, the Army Corps of Engineers began arriving in Alaska. Over 10,000 soldiers came with 250,000 tons of materials for their mission. Their method was, surveyors worked roughly ten miles ahead of the bulldozers and the men who cleared the path. The surveyors would map the exact route, the men behind them would catch up and blaze a path. A battalion of bulldozers cleared the way by knocking down trees in a path roughly 50 to 90 feet across.</p> <p>In fewer than eight months, the seven regiments of the Army Corps of Engineers worked and layed down an astonishing 1,500 miles of highway. The men who built the highway had overcome environmental, technological and physical hardships to complete what many consider one of America's greatest construction projects. -e</p>	0.0	0.0
